x1

Removing the G5 Handlebar

01

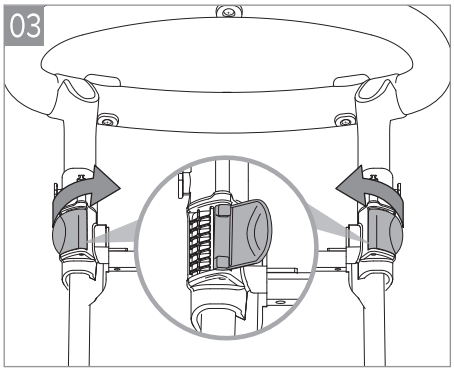

First, remove the cup holder from stroller frame.

02

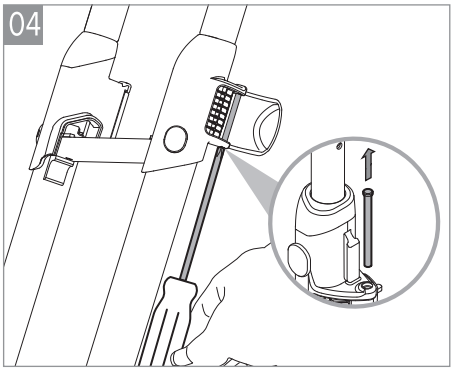

Remove the screws located beneath the cup holder—one on each side—then lift the cup holder up and away from the stroller frame.

03

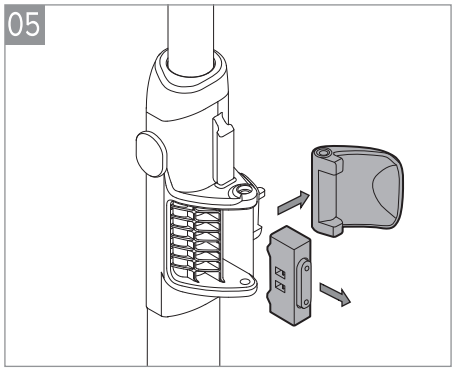

Open both handlebar adjustment latches

04

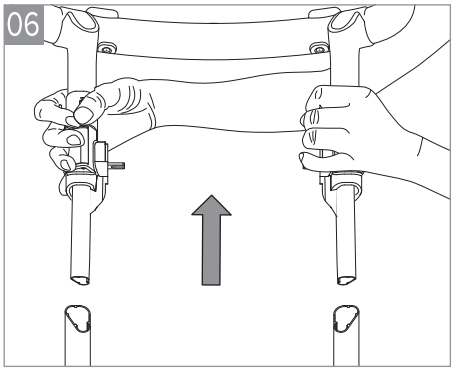

Remove the metal axle pins on both sides by gently tapping them upward with the included screwdriver.

05

Once the pins are removed, the adjustment locks and latches will come apart.

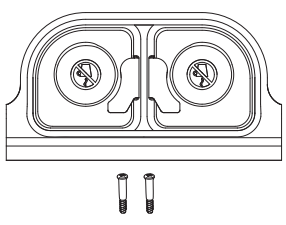

06

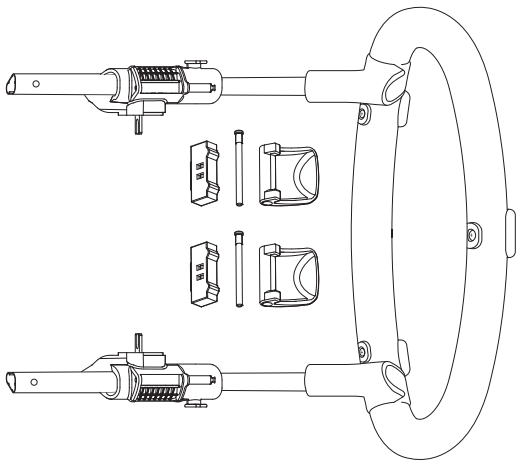

Remove handlebar by sliding up and away from stroller frame.

*Note: Once all pins and the cup holder are removed, you can lift the entire handlebar assembly away from the stroller frame.

07

Reminder: Store all parts in a safe place for future use.

Assembling the Helix Handlebar

01

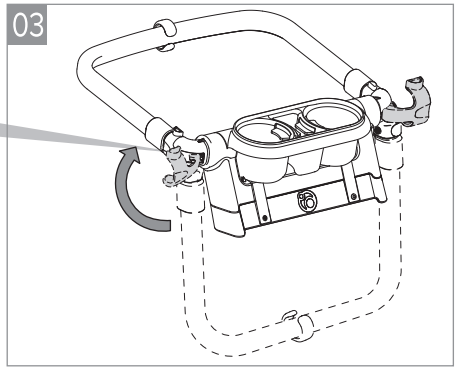

Handlebar extender will arrive folded. It must be open to attach onto stroller frame.

02

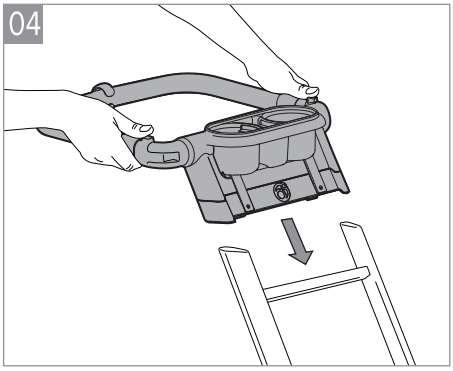

To unfold, locate the grey latches on the left and right sides of the handlebar extender and press to unlock and open the latches.

03

With latches open, you can now rotate the handlebar correct position. Your cup holder will now be facing up.

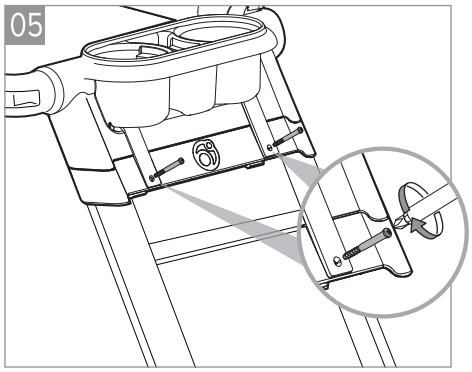

04

Slide each side of the handlebar extender onto the stroller frame.

Important: Make sure the frame has been completely pushed into the handlebar slots.

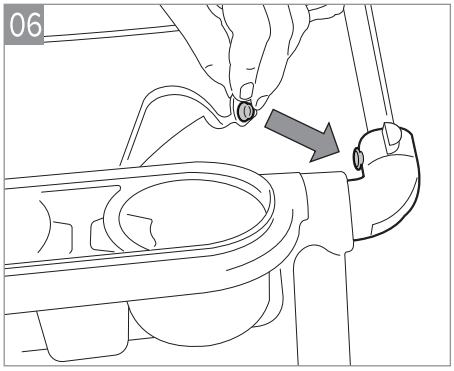

05

Secure the Handlebar

* Take the two provided screws and insert them through the holes from the outside.
* Use a screwdriver to tighten both screws firmly, securing the Helix handlebar to the frame.

06

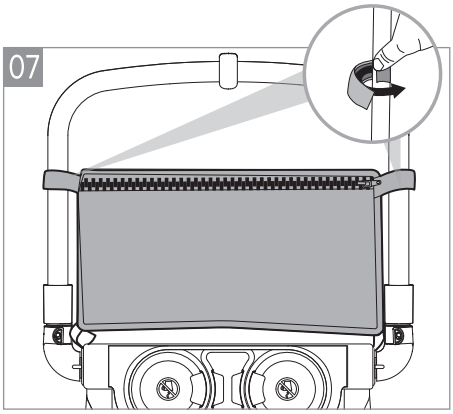

Attach Organizer

Snap the buttons on the bottom of the organizer onto both sides of the handlebar extender.

Note: Mesh side should be facing up.

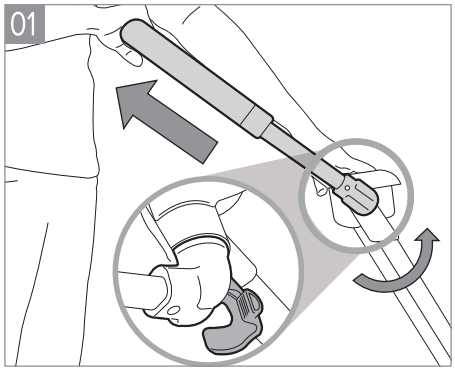

Using the Helix+ Handlebar

07

Wrap and fasten the Velcro straps around both sides of the handlebar.

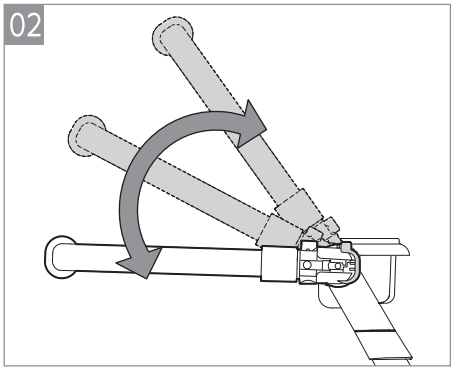

01

Adjust Handlebar Length

To adjust handlebar length, unlock each latch, slide handlebar out then lock each latch.

02

Adjust Handlebar Height

To adjust handlebar height, unlock the side latches, move the handlebar to one of three height settings, then re-lock the latches to secure.

⚠WARNING

For your child's safety, the organizer must always remain attached to the handlebar. This positioning is crucial to prevent injuries from accidental spills from the cup holder.
